

Original observed model

Reward sign and magnitude
 negative positive

Attacker-induced observed model

Observed transition probability

→ 0.05 → 0.25 → 0.50 → 0.75 → 0.95
 $P(S'_1 | S_1, a)$

Each complete Period-1 state has its own selected-action arrow. Each circle is split by action: left = a_0 , right = a_1 .
